

A new meter collar device that makes connecting a portable generator safe and easy

When you connect a portable generator to GenerLink™ and start it up, GenerLink™ automatically disconnects your service from the electric utility grid preventing the possibility of back feed, which can damage equipment and harm line personnel. Because GenerLink™ is designed and rated to connect directly to a standard electric service of 200 amps or less, all you have to do to operate a critical appliance is flip a breaker on in the breaker panel once the generator is connected.

### What is GenerLink™?

GenerLink™ is a five-inch device that is installed behind your electric meter by your local utility. GenerLink™ eliminates the hassles of running multiple extension cords or hiring an electrician to install an expensive transfer switch and sub-panel to get your generator up and running. Sold through the member services department at the cooperative, GenerLink™ systems are available in both 30 and 40 amp options and even can include surge protection.

### How can I get GenerLink™ at my home or business?

WKRECC members can now purchase GenerLink™ through the cooperative. Members interested in purchasing GenerLink™ should complete a GenerLink™ Order Form at either the cooperative's Mayfield office or online at [www.wkrecc.com](http://www.wkrecc.com). Once an Order Form is completed and returned to the Member Services Department, a WKRECC representative will call to schedule an installation appointment. Installation usually takes fewer than 30 minutes.

### What is the price for a GenerLink™ system?

The GenerLink™ system is available in both 30 amp and 40 amp versions, depending upon the size of your generator and usage. Each version is also available with or without a surge suppression option.

**\$660 30 amp without surge protection**

**\$740 30 amp with surge protection**

**\$765 40 amp without surge protection**

**\$845 40 amp with surge protection**

Each GenerLink™ system comes with a 20' long cord standard. Members have the option of purchasing longer cord lengths for the added price of \$50 for 40'; \$100 for 60'; \$150 for 80'; and \$200 for 100'.

### Why is having a GenerLink™ system important?

A GenerLink™ system eliminates the use of extension cords and other connections that can be hazardous to members, neighbors, emergency personnel and utility workers. GenerLink™ also detects when a generator is operating and automatically disconnects from the utility grid, eliminating back-feed, which is extremely dangerous for utility personnel.

Call 270-247-1321 or 1-877-4WKRECC with any questions or if you would like to purchase your new GenerLink™ system.
